

LLX Founder & CEO, Ellen Varelas said: *“We are enormously proud to be shortlisted for this award, which recognizes the vital contribution that LLX makes to better patient outcomes by enabling pharmaceutical companies to operate more efficiently, productively and compliantly through automation.*”

“We are proud to be recognized for our consistently excellent service to the healthcare industry, which includes our global mission to transform how the pharmaceutical industry collaborates with healthcare professionals worldwide.”

“This nomination speaks volumes about the team that we are and the companies that we are proud to partner with. We are a finalist in outstanding company, and ultimately that makes us all winners.”

We are delighted to share that LectureLinx (LLX) has been named as one of just three companies shortlisted for the prestigious **Professional Services Firm of the Year** title at the upcoming [Health Tech World Awards 2024](#).

These annual awards recognize the brightest lights of the Health Tech World and celebrate the best examples of leadership, innovation, and impact in health technology globally.

What makes this shortlist even more meaningful is the caliber of the companies on it. We are extremely proud to be sharing the spotlight with [US Med-Equip \(USME\)](#), who are harnessing technology to meet and anticipate hospital equipment needs so that clinicians can focus on patient care - and [Answer Digital](#), who are enabling the NHS (the UK’s publicly funded healthcare system) to accelerate and scale its adoption of AI through first-of-its-kind open-source technology, thereby reducing wait times and accelerating diagnoses.

The winner will be announced at a virtual awards event on April 18, 2024.
