

We are proud to announce the latest in furthering our commitment to keeping our customers and company safe at the highest possible level. We have received our company's SOC 2 Type II report, once again validating our best-in-class security and privacy commitment.

This SOC 2 Type II Certification demonstrates that an independent accounting and auditing firm reviewed and examined our company and that LectureLinx achieved stringent benchmarks in security, privacy, availability, processing integrity, and confidentiality.

More comprehensive than a Type I, the Type II assessment reviews company infrastructure, software, people, data, policies, procedures and operations, and covers the five Total Trust Service criteria: security, availability, processing integrity, confidentiality and privacy to show a greater level of audit assurance.

LectureLinx CEO, Ellen Varelas said: "It has been hugely important for the company to secure this globally recognized, third-party validation which mitigates cybersecurity threats, safeguards client information and data, and reinforces our commitment to ensuring critical and effective security standards. Most importantly, it validates the enduring trust that our clients have in the LectureLinx company and team."
